Division:	<input checked="" type="checkbox"/> S.1 – 3	<input type="checkbox"/> S.4 – 7	
Date:	12 th May, 2008		
Title:	Let's learn from this water droplet		
Picture:			
Caption:	The water droplet		
Commentary:	<p>Clean, fresh water is essential to human and other creatures. Water has three different forms: solid, liquid and vapour. In the same sense, we need distinct methods in order to solve different kinds of problems and be flexible as water. Water changes their forms according to the temperature. When it is cold, it turns into ice and when it is warmer, it turns back to water. When we have difficulties, we need to solve them. We have to be as tough as the ice to face the hardship and never give up. When we pass through them, we may have learned a lesson.</p> <p>There is water everywhere. In places where you can see, like river and ocean; and places you don't see, like in the air and in our body. Water is very important to all living creatures and we are also very important to the society. Many of a little makes a mickle; the stones of the shore have different shapes and sizes which are carved by the waves, but a small wave cannot do this. Instead, many and many small waves did this. Unity is strength.</p>
